

Worcester Controls E51/52 Enviro-Safe High Integrity Flanged Ball Valves

General Description

With environmental protection and control established as a major issue for the future, Flowserve Worcester Controls provides a range of high integrity valves: the Enviro-Safe E51/52.

Worcester's primary aim was to design a range of Class 150/300 ball valves to prevent external leakage in demanding applications such as highly toxic media (phosgene, chlorine etc) or with very costly media where wastage is unacceptable.

Experience has shown that repeated valve operation eventually causes wear in the stem sealing area and this leads ultimately to external leakage.

Worcester's Enviro-Safe range of ball valves has a highcycle life at an increased range of temperatures and pressures. At the heart of the valve's high integrity performance is its dual stem packing.

The unique primary seal is designed so that it will always fail in service BEFORE the secondary seal. With a monitoring port drilled through to a lantern ring which is located between the two sealing stages, primary seal leakage can be detected whilst the secondary seals ensure overall integrity. This unique and foolproof stem packing design is live loaded with stainless steel disc springs and has been proven in testing to be bubble-tight on helium even after primary seal leakage. Primary seal integrity can then be restored by simply tightening down the gland plate.

The Enviro-Safe features two stem purge bosses. One is drilled and tapped to 1/8" BSPT standard thread that allows connection of instrumentation/sensing devices, while the optional second port allows through purging between the stem seals. In addition the one piece body eliminates unnecessary joints.

The Enviro-Safe valves are also available in firesafe versions EF51/52 or sour gas versions to NACE (MR. 0175/ISO 15156).

A further benefit allows automated versions to have the actuator removed without affecting the integrity of the valve seals.

Size Range

The Enviro-Safe comes in 8 sizes ranging from $\frac{1}{2}$ " to 6" (15mm-150mm).

Flanges

Integral to the valve body, flanges are rated ASME Class 150 for the E51 and ASME Class 300 for the E52. Flange dimensions are to BS EN 1759-1/ASME B16.5 and face to face lengths are to BS EN 558-2 table 6/ASME B16. 10.

Alternative metric flanges are available to BS EN 1092-1 (PN16/40).

Body Construction

The valves are all of one-piece design, and are available in either low temperature carbon steel or stainless steel as standard. Other materials are available.

Stem

The blow-out proof stem design is of a larger diameter than normal and is retained by a tamper-proof split ring. The stem is 316 stainless steel as standard, but other options can be supplied. Primary stem seals are PTFE in trapezoidal section, and secondary seals are PTFE chevron rings. Alternatively graphite seals are supplied for fire-safe and high temperature applications.

Ball

The ball is manufactured from 316 stainless steel as standard, and other materials, as required.

Seats

A range of seat materials is available to suit a wide variety of applications and include virgin PTFE, 15% glass-filled PTFE, Fluorofill, PEEK and metal (graphite impregnated 316 stainless steel). (Pressure/temperature ratings can be found on the back page).

Body Seals

½" to 2" (15-50mm): Virgin PTFE.

3" to 6" (80-150mm): 15% glass-filled PTFE.

Automation

All Enviro-Safe valves are designed to be simply and easily actuated.

Applications

The Enviro-Safe valve can be prepared for use on chlorine, including the supply of ball, stem and related parts in either Hastelloy or Monel as required.

In fact the Enviro-Safe has already established itself as THE valve for chlorine duty, being adopted as the site standard on a number of plants.

In addition the valve has proven itself in numerous applications

including phosgene, hexane, toluene, ethylene oxide, T.C.A.I.*, ionones, hydrogen, high temperature thermal fluids, superheated steam and many others.

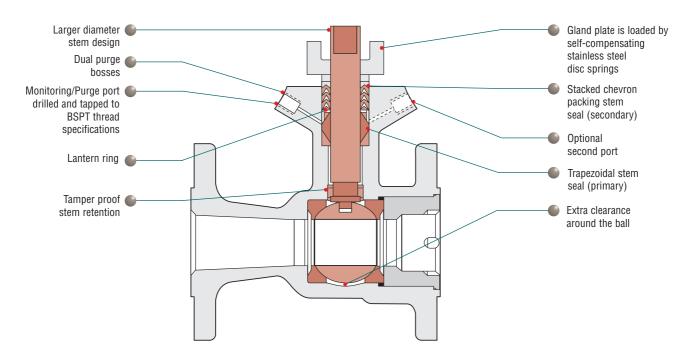

A further use for the Enviro-Safe is on high cycling duty, where the design of the valve ensures significantly extended life and minimal maintenance.

* Tri-chloro-acetal-isocyanate.

Design features of the Enviro-safe stem

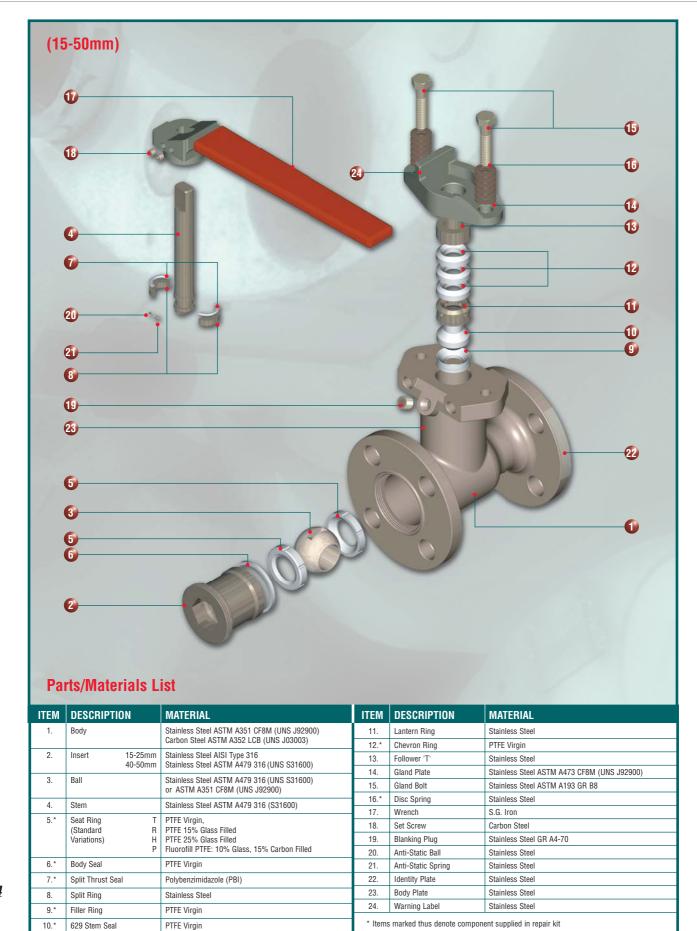

Features

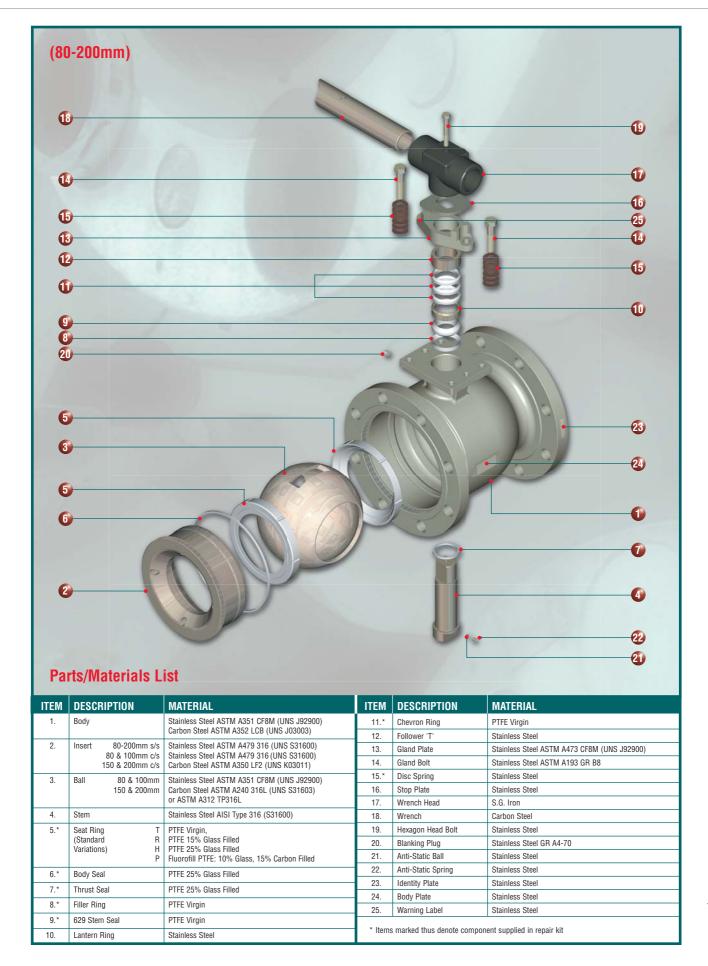

- Primary and secondary stem sealing
- One-piece body casting
- Live loaded gland assembly
- Stem monitoring/purge port
- Blow-out proof stem
- Range of seat materials
- Integral body mounting platform

Benefits

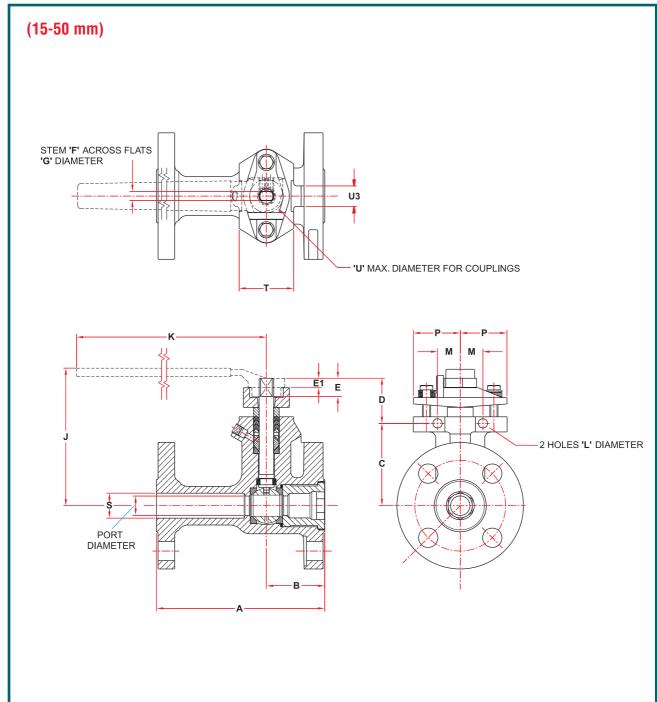

- For ultimate sealing performance
- To minimise leak paths
- For long sealing life
- To monitor integrity
- For added safety
- For greater pressure/temperature capability
- For simpler actuation and in-line actuator removal

Notes

- 1. For firesafe valves, square section expanded graphite packings are used.
- When wrench not fitted, flats on stem when parallel to pipeline axis, denotes ball open position.
- 3. Other seat variations are available.
- 4. Installation, Operating and Maintenance instructions are supplied with product and are also available on request.
